Production microbiology samples at the IPH

Kris Vernelen, Clinical Biology, IPH, Belgium

Bacteriology

Samples:

- lyophilized
- simulated clinical samples

Control at IPH (3 samples): identification, count, purity,

Control by (9) expertlabs: identification, purity: acceptance of samples

Min. nb. exp.labs = 5

Homogeneity = based on results expertlabs (80%)

Parasitology

Samples:

- bloodsmears
- stool

Control at IPH: presence of parasite (10 samples; L.loa, M. perstans,....: all samples)

Control by (9) expertlabs: identification, presence: acceptance of samples

Min. nb. exp.labs = 3

Homogeneity = based on results expertlabs (66%)

Infectious serology

Samples:

- lyophilized
- liquid: HIV, HCV

No control at IPH (no analyzer)

Control by (10) expertlabs: based on chosen parameter:
acceptance of samples

Min. nb. exp.labs = 3

Homogeneity = based on results expertlabs (66%)
